

Rotary Fixture

**Meet the needs of tomorrow
with today's technology.**

No more need to struggle with sip and bridges in your wave solder process. With the use of an extensive flow dynamics program, we have determined that changing the angle of a PCB across the wave by as little as one or two degrees, dramatic improvements were made. With our unique carrier design, the PCB can be set to any angle within seconds. Additional hold downs for location, supporting or holding down components can be added.
